

ABSTRACT OF THE DISCLOSURE

A retractable handle of luggage comprises a T-shaped member having a top central opening, an intermediate hollow neck, and a lower hollow enlargement secured to two sliding tubes of two adjacent pulling rods, a spring depressible push button disposed in the opening of the T-shaped member, a revised Y-shaped actuated member disposed within enlargement, being operatively secured to the push button, and two connecting rods each having top end disposed in the enlargement and the bottom end coupled to a locking device. Pressing the push button will push down the actuated member to contact and push down the connecting rods for unlocking the locking devices.
